PROFILE

Final-year software engineering student at ESPRIT. Experienced in web development (Spring Boot, Angular, FastAPI) and mobile development (Flutter), integrating local LLMs with guardrails and graceful fallbacks, and a strong testing mindset: unit and end-to-end tests, coverage measurement, CI/CD and monitoring.

TECHNICAL SKILLS

Languages: Java, Python, Dart, TypeScript/JavaScript, SQL, PHP; Rust (Polars).
Web & mobile: Spring Boot, Angular, FastAPI, Flutter, JavaFX, Symfony; REST APIs, Spring Security, JWT/OAuth2, JPA/Hibernate, WebSocket, Gateway, Eureka, Redis.
Data & AI: MySQL, PostgreSQL, SQLite (sqflite), MongoDB, Qdrant, Polars; Ollama, Qwen, QLoRA/Unsloth, CLIP, scikit-learn, pandas; prompt engineering, JSON output validation.
Quality & DevOps: JUnit, Mockito, pytest, Karma/Jasmine, Playwright, Flutter tests (widget, golden, integration); Docker, Jenkins, GitHub Actions, SonarQube, Prometheus, Grafana, Git/GitHub, Linux; Kubernetes basics.
Design: modular and layered architecture, GoF design patterns, UML; UI mock-ups in Figma.

PROFESSIONAL EXPERIENCE

ReaddlyTech | Internship – E-biessa, AI-powered car-parts marketplace
Jul – Aug 2026

Angular · Spring Boot · FastAPI · MySQL · Qdrant · Qwen · Ollama · Redis · Docker

- Designed and built the marketplace: buyer, seller and admin journeys, multi-vehicle listings, reviews, moderation and real-time chat with attachments.
- Implemented multilingual search, compatibility checks, personalised recommendations and part-type identification from photos; fine-tuned Qwen 2.5 with QLoRA/Unsloth.
- Set up backend, frontend and E2E tests, a Jenkins/SonarQube pipeline, Prometheus/Grafana monitoring and circuit breakers on AI calls with graceful fallbacks.

Tunisie Telecom – Actel Sbeitla | Introductory internship and field work
Aug – Sep 2025

- Installed and maintained fixed lines and the subscriber connection chain (main distribution frame, sub-distribution frame, distribution point); diagnosed faults (short circuits, insulation faults, water ingress, interference).

ACADEMIC PROJECTS

Nova Paris | Hotel management mobile app
2026

Flutter · Dart · sqflite · Android notifications · QR codes · E2E tests on a real device

- Built the rooms & housekeeping module (20 features, ~20,500 lines of Dart): automatic assignment, scored inspections, incidents with photos and voice notes, inventory, real-time dashboard.
- Designed the app's foundation: event-decoupled modules, SQLite database with 7 schema versions migrated without data loss, transactions with role and version checks, idempotent actions.
- 155 unit, widget and golden tests, plus a 43-step end-to-end test on a real Android phone (43/43).

Nirvana | Restaurant web app with AI
2026

Angular 20 · FastAPI · Python · SQLite · Ollama (Qwen 2.5) · scikit-learn · pytest

- Allergy-aware personalised dish recommendations from a local LLM, with a rule-based fallback; demand and ingredient forecasting (scikit-learn); customer review analysis.
- Secure AI integration: no raw personal data sent to the model, validated outputs, error handling; 86 tests and 94% coverage; 30-page technical report.

Aletheia | Microservices-based learning platform
2026

Spring Boot · Angular · MySQL · Spring Cloud Gateway · Eureka · Docker

- Built the digital library: catalogue, search, filters and pagination, stock management and alerts, cart, orders, simulated payment and receipts; integrated through Gateway, Eureka and Docker.

Bachelor's final project | Analytical databases in Rust: Polars & Qdrant
2024

Rust · Python · Polars · PostgreSQL · Qdrant · CLIP · Docker

- Benchmarked Polars (Rust/Python) against PostgreSQL on 67 million rows (9 GB): analytical queries several times faster with Polars (e.g. 3.7 s vs 15.6 s).
- Built semantic search, similar-image search over 6,000+ images and a recommendation system with Qdrant.

EDUCATION

ESPRIT - Engineering degree in Computer Science | 2024 - present
ISSAT Kasserine - Bachelor's degree in Computer Science (Software Engineering & IS) | 2021 - 2024
